Topic choice: Online Light Novel Library

Introduction to the project:

   In this project, we are going to build an online web application that is meant to provide functions similarly to a library. The background is that these days, many light novels are only available in Japanese and not in any other languages, but there are many people that are willing to voluntarily translate them into different languages for people around the world to be able to read it.
   So my idea for this library is to allow people to register accounts on the library system, and allow them to upload the translated version of novels in different languages, and allow the reader to download them. Accompanying the base function, We also want to create some communication interfaces for the readers to communicate with each other, and this can be achieved by implementing the comment area, and the voting system.
